ASSIGNMENT PROJECT

SALES REPORT

Background: Our company is a car dealership that sells various car models. To effectively

track and analyse our sales performance, we need a comprehensive Car Sales Dashboard in

Power BI.

Objective: The objective of this project is to design and develop a dynamic and interactive

Car Sales Dashboard using Power BI. The dashboard will visualize critical KPIs related to our

car sales, helping us understand our sales performance over time and make data-driven

decisions.

Problem Statement 1: KPI's Requirement

The dashboard should provide real-time insights into key performance indicators (KPIs)

related to our sales data. This will enable us to make informed decisions, monitor our

progress, and identify trends and opportunities for growth.

1. Sales Overview:

• Year-to-Date (YTD) Total Sales

• Year-over-Year (YOY) Growth in Total Sales

2. Average Price Analysis:

• YTD Average Price

• YOY Growth in Average Price

3. Cars Sold Metrics:

YTD Cars Sold

YOY Growth in Cars Sold

Problem Statement 2: Charts Requirement

- 1. **Sales Weekly Trend:** Display a line chart illustrating the weekly trend of sales. The X-axis should represent weeks, and the Y-axis should show the total sales amount.
- 2. **Total Sales by Body Style:** Visualize the distribution of total sales across different car body styles using a Pie chart.
- 3. **Total Sales by Color:** Present the contribution of various car colors to the total sales through a donut chart.
- 4. **Cars Sold by Dealer Region:** Showcase the sales data based on different dealer regions using a bar chart to visualize the sales distribution geographically.
- 5. **Company-Wise Sales Trend in Grid Form:** Provide a tabular grid that displays the sales trend for each company. The grid should showcase the company name along with their sales figures.
